

## General information

### Aqua Gentle

The Aqua Gentle water care kit includes everything required to manage a hot tub's routine water care: **testing**, **treating**, and **conditioning**. It is designed as a 10-week kit, however this may vary according to hot tub size and usage. The Aqua Gentle water care kit works with and complements the AquaSParkle complete starter kit and hot tub maintenance kit.

#### 'A complementary family of kits'

Complete Starter Kit - Set up your tub and balance your water.

Aqua Gentle - maintain water quality.

Maintenance Kit - keep your tub operating and looking fantastic.

#### What it includes:

- Aqua Gentle test strips for **daily** water testing.
- Aqua Gentle Fizzy Tabs for **daily** disinfection of your hot tub water.
- Aqua Gentle Conditioning Liquid for a **weekly** water softening treatment.
- Spa Fusion for **fortnightly** water treatment.

#### USPs:

- Reduced chemical consumption: Aqua Gentle Conditioning Liquid helps to reduce unwanted build-up in the pipework. This reduction reduces the demand put on your sanitiser and in turn optimises the amount required (improving sanitation and saving cost on sanitiser).
- Soft and gentle formula: Aqua Gentle has been especially formulated to make the water feel luxurious and soft against the skin. The combination of flocculants, water conditioner and softeners work in synergy to help deliver clear and inviting hot tub water.
- Lightly fragranced: Aqua Gentle Conditioning Liquid has been further improved to provide users with a light but not overpowering lavender scent to help deliver a calm and tranquil bathing experience

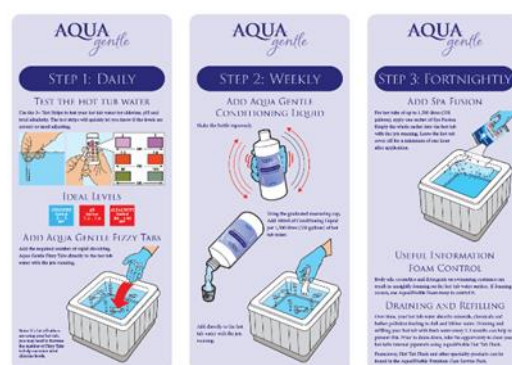

# Product guide Aqua Gentle

The Aqua Gentle user guide gives simple step by step instructions to using the Aqua Gentle products.

The steps are laid out in three easy to follow sections explaining how the products are to be used: **'Daily,'** **'Weekly,'** and **'fortnightly.'** The instructions are supported with clear illustrations.

Additionally, the guide includes a problem solving section and safety information.

### PROBLEM SOLVING

SYMPTOM	CAUSE	REMEDY
Green water / Cloudy water	Inadequate sanitiser. Algae may be present.	Shock dose with <b>Spa</b> <b>Shock</b> or use a double dose of Aqua Gentle Spa Tabs or consider a drain and refill.
pH hard to control	Low alkalinity	Use <b>Spa TA Plus</b> to raise total alkalinity.
Foaming water	Oil / detergents	Use <b>Spa FoamAway</b> .
Cloudy water	Poor chemical controls or inadequate filtration	Check cartridges or consider if time to drain and refill. Restart water and add chemicals if necessary.
Rough sides / rings	Scale formation	Ensure pH levels are within the ideal range. If scale persists, use <b>Spa ScaleAway</b> .
Test results vary	Are bottles too full?	Test when hot tub is switched off for true results.

The specialty products shown can all be found in the AquaPak® Premium Care Service Pack.

### SAFETY

**GENERAL**

- Do not allow water temperature to exceed 40°C (lower for children).
- Do not leave your unattended children unattended.
- Do not overfill the hot tub.
- Do not use electrical appliances near water.
- Do not use glass around the hot tub.
- Do not drink alcohol, beverages, tobacco or during hot tub use.
- If you are pregnant, have high blood pressure, or cardiovascular conditions, consult your doctor before using a hot tub.
- Wear gloves when changing and using hot tub cartridges.

**CHEMICAL HANDLING**

- Read instructions thoroughly on each product / hot tub before use.
- When pre-diluting chemicals, always add chemicals to water and not vice versa.
- Always pre-dilute chemicals in a clean, plastic container in a well-ventilated area.
- Never mix different chemicals in their concentrated form as a dangerous reaction may occur (this includes the products in this kit and also other products, such as bleach and wood preservative).
- In case of a spillage, clean up using clean mop/towels and dispose in the hot tub. Wash drained spill area with water.
- Never use undiluted chemicals.
- Always wash hands after handling chemicals.

**STORING CHEMICALS**

- Store chemicals well away from children and pets.
- Store in a secure, cool and dry place.
