chemical brand**

Blue Horizons Bromine Tablets

Ideal Bromine range: 2 - 4mg/l (ppm)

Bromine is a popular alternative to chlorine as a sanitiser. Blue Horizons Bromine Tablets are applied via a chemical feeder (Brominator) to maintain bromine levels in your swimming pool at the ideal level of 2 - 4mg/l (ppm).

APPLICATION INSTRUCTIONS

WARNING: Do not apply directly to pool.

1. These tablets are designed for use with bromine feeders and floating dispensers.
2. When feeder device requires refilling with tablets always follow manufacturer's instructions.
3. Ensure tablets used in the feeder are of the same chemical (Bromo-Chloro-Dimethyl Hydantoin). If other materials have been used previously, wash out feeder thoroughly before adding tablets.
4. Adjust feeder to ensure a constant bromine residual is present in the pool.
5. Check bromine levels regularly with a Test Kit and maintain a bromine residual of 2 - 4mg/l (ppm) for domestic swimming pools.
6. Check pH value regularly with a Test Kit and maintain levels between 7.2 - 7.6.

Note: It is recommended that you periodically (e.g. fortnightly) shock or oxidise your water, using Blue Horizons Non Chlorine Shock or Pool Fusion.
