Kleenpool Algicide

Kleenpool Algicide is a long life copper based algaecide usually added after spring commissioning or winter close down of your pool.

APPLICATION INSTRUCTIONS

1. If algae are visible, brush thoroughly with a pool brush.
2. Check the chlorine level and ensure it is established within the ideal range 1 – 3mg/l (ppm). If algae are present, shock dose the pool to a minimum chlorine level of 5mg/l (ppm) using Blue Horizons Rapid Shock, Granular Shock or Shock 'n' Floc.
3. Maintain pH level within the ideal range of 7.2 – 7.6. If not in this range, adjust. Avoid high pH levels, particularly above 7.6.
4. Gradually pour the solution into the pool, whilst the pump(s) are turned 'on' preferably near the water inlets to aid distribution.
5. After the initial dose, this product should be re-applied approximately every 6 months to prevent algae formation.

6 monthly Dose Rates

Water Volumes		Algae destruction
Litres	Gallons	
4,545	1,000	160ml
11,364	2,500	400ml
22,700	5,000	800ml
45,450	10,000	1.6ltr
68,175	15,000	2.4ltr
