### Description

White and blue granular product with characteristic odour

Available in: 1.12kg Box, 4.48kg Box for 20m<sup>3</sup> size

5.04kg box for 30m<sup>3</sup> size

pH Neutral

Solubility: multimiscible

Pool Volume		Dosage required	
20m <sup>3</sup> (ltrs)	*30m <sup>3</sup>	Initial Dose	Weekly dose
Upto 20 (20000)	Upto 30	2 Double sachets	1 Double sachet
Upto 40 (40000)	Upto 60	4 Double sachets	2 Double sachets
Upto 100 (100000)	Upto 150	10 Double sachets	5 double sachets

\*Please note that this product is available in different volume treatment sachets. For those replacing the Duotabs please use the 30m<sup>3</sup> sachets.

Prior to dosing check and adjust the pH to between 7.0 – 7.4

The larger sachet contains the active oxygen.

The smaller sachet contains the algacide, clarifier and stabiliser.

Carefully cut open the sachets with scissors, and add both chambers directly to the pool with the pumps running. Test the level of the product in the water using the Active Oxygen test kit 1-2hrs after doing the double sachets. The level should be at least 8mg/l.

With high bather loads, thunderstorms and high temperatures it may be necessary to increase the dosage. See table on page 39.

The product is compatible with chlorine and if problem turbidity does occur then a shock dose would be advised.
